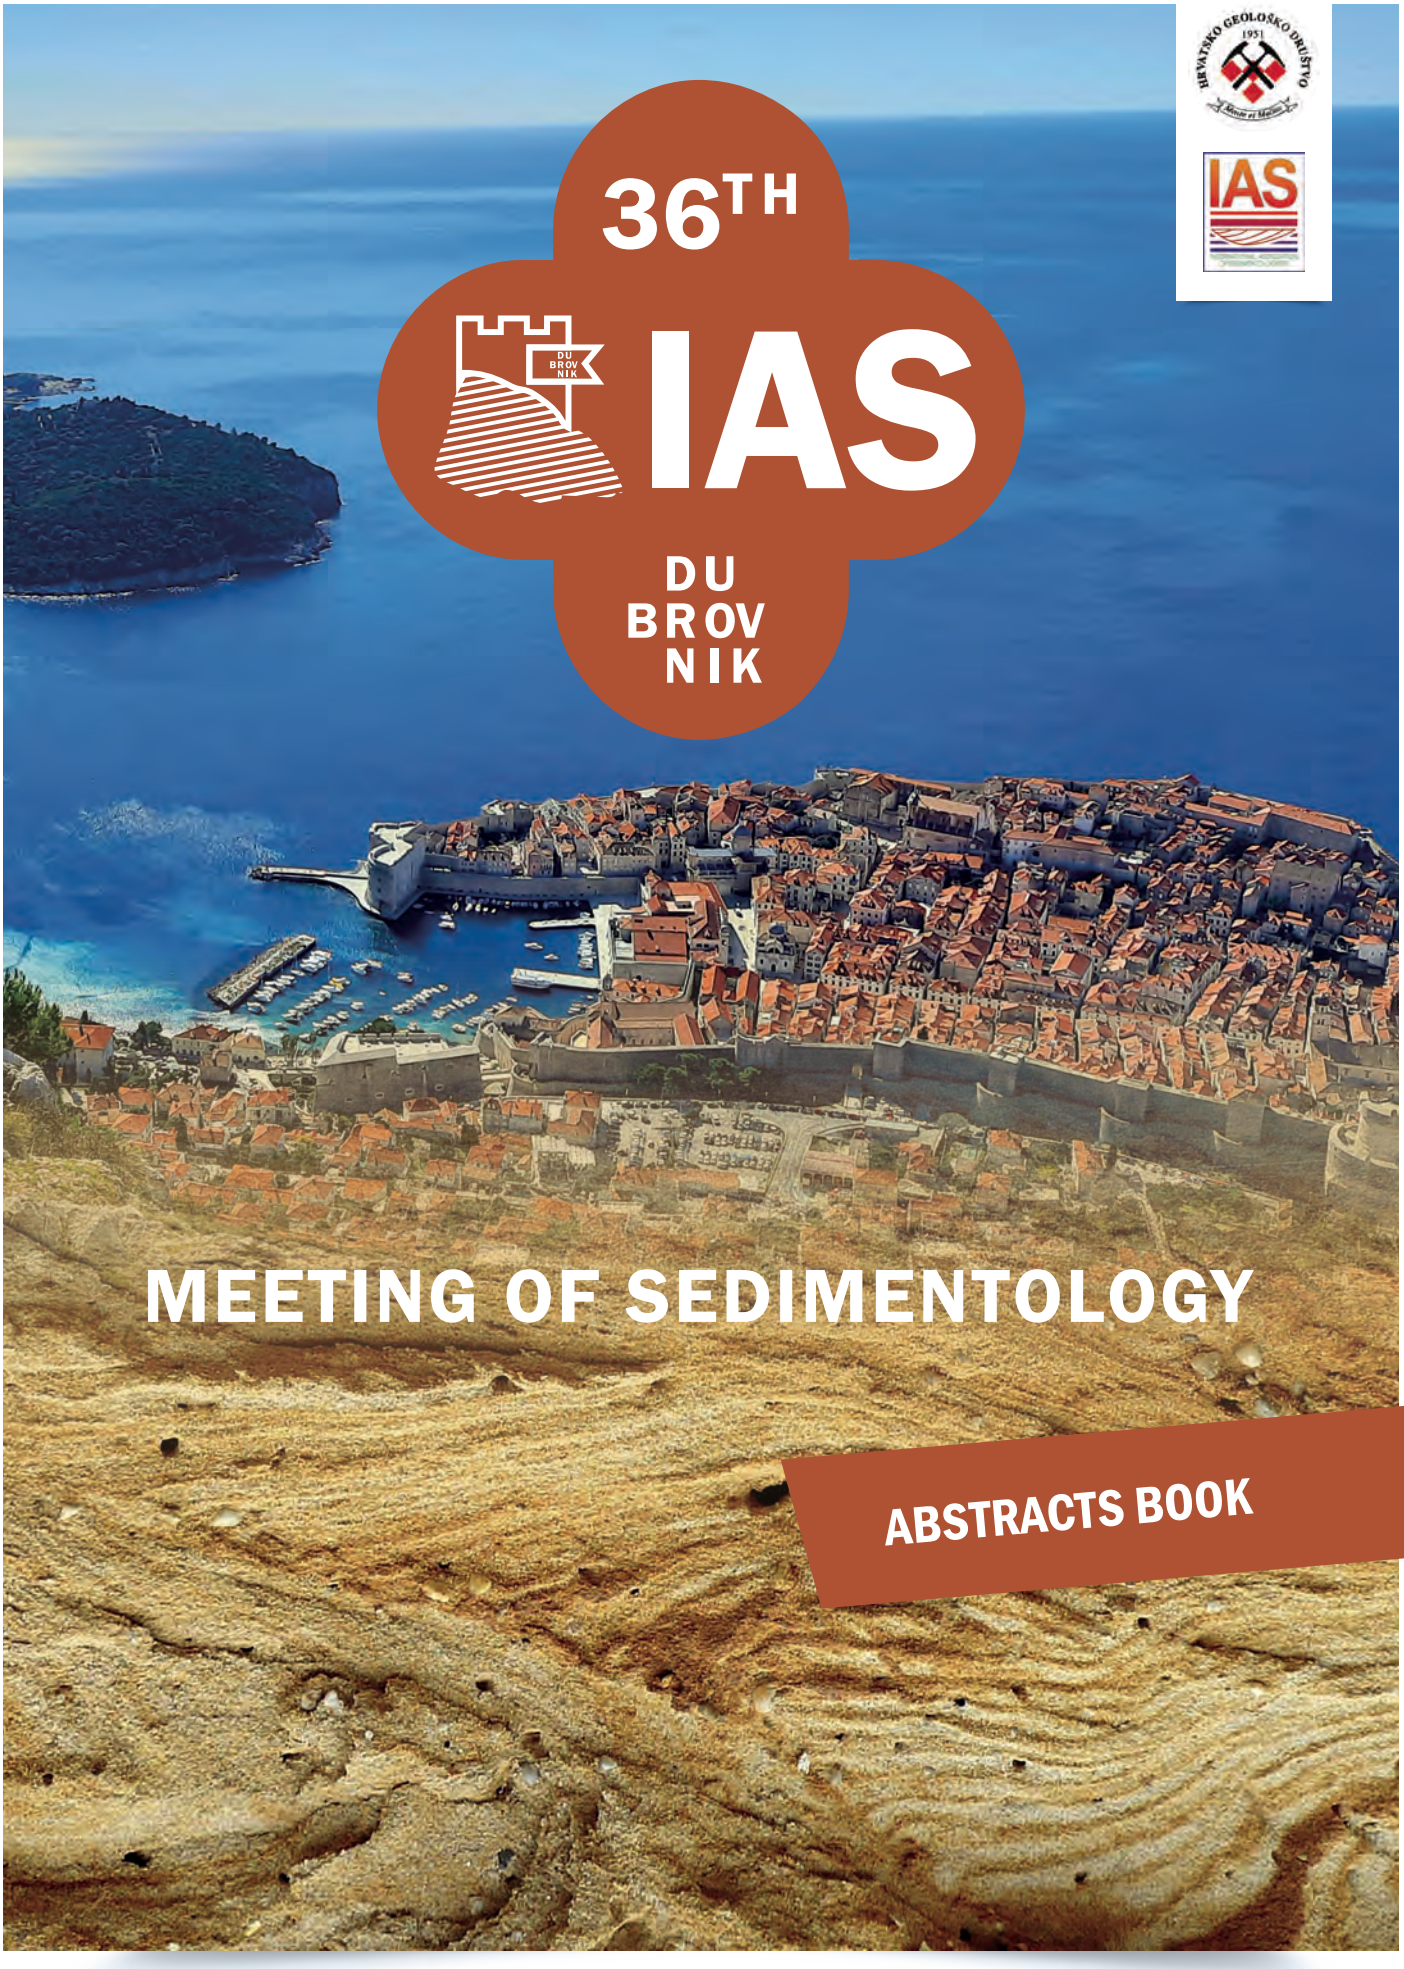
Naturally occuring botryoidal carbonates in a Holocene karst paleolake Prološko Blato (Dalmatia, Croatia)

Ivkić Filipović, Ivona; Ilijanić, Nikolina; Miko, Slobodan; Hasan, Ozren; Barudžija, Uroš



36TH IAS MEETING OF SEDIMENTOLOGY

DUBROVNIK

ABSTRACTS BOOK

12–16 June 2023, DUBROVNIK, **CROATIA**

36th International Meeting of Sedimentology
June 12–16, 2023, Dubrovnik, Croatia

ABSTRACTS BOOK

Organized by:
Croatian Geological Society (HGD) and International Association of Sedimentologists (IAS)

Organizing Committee
Lara Wacha, ***chair,*** *Croatian Geological Survey, Zagreb*
Katarina Gobo, *University of Zagreb, Faculty of Science*
Nikolina Ilijanić, *Croatian Geological Survey, Zagreb*
Tvrtko Korbar, *Croatian Geological Survey, Zagreb*
Marijan Kovačić, *University of Zagreb, Faculty of Science*
Duje Kukoč, *Croatian Geological Survey, Zagreb*
Borna Lužar-Oberiter, *University of Zagreb, Faculty of Science*
Maja Martinuš, *University of Zagreb, Faculty of Science*
Slobodan Miko, *Croatian Geological Survey, Zagreb*
Davor Pavelić, *University of Zagreb, Faculty of Mining, Geology and Petroleum Engineering*
Kristina Pikelj, *University of Zagreb, Faculty of Science*
Igor Vlahović, *University of Zagreb, Faculty of Mining, Geology and Petroleum Engineering*

Scientific Committee
Igor Vlahović, **president,** *University of Zagreb, Croatia*
Nevena Andrić Tomašević, *Karlsruhe Institute of Technology, Germany*
Bruno Campo, *University of Bologna, Italy*
Sonia Campos Soto, *Complutense University of Madrid, Spain*
Luca Caracciolo, *FAU Erlangen-Nürnberg, Germany*
Blanka Cvetko Tešović, *University of Zagreb, Croatia*
Shahin E. Dashtgard, *Simon Fraser University, Canada*
Andrea Di Capua, *National Research Council – IGAG, Italy*
Goran Durn, *University of Zagreb, Croatia*
Gianluca Frijia, *University of Ferrara, Italy*
Massimiliano Ghinassi, *University of Padova, Italy*
Luis Gibert Beotas, *University of Barcelona, Spain*
Bosiljka Glumac, *Smith College, USA*
Antun Husinec, *St. Lawrence University, USA*
Stuart Jones, *Durham University, UK*
Tvrtko Korbar, *Croatian Geological Survey, Croatia*
Marijan Kovačić, *University of Zagreb, Croatia*
Juan Carlos Laya, *Texas A&M University, USA*
Marta Marchegiano, *University of Granada, Spain*
Cole McCormick, *Pennsylvania State University, USA*

Theme 1. Continental carbonates, karst and cave deposits

General Session

Poster presentation

Naturally occuring botryoidal carbonates in a Holocene karst paleolake Prološko Blato (Dalmatia, Croatia).

Ivona Ivkić Filipović[1], Nikolina Ilijanić[1], Slobodan Miko[1], Ozren Hasan[1], Uroš Barudžija[2]

The Prološko Blato is a seasonal karst wetland in the NW part of the Imotsko polje (karst polje) in the Dalmatian hinterland. Ongoing paleolimnological research revealed the existence of Holocene paleolake sediments made of pale brown lacustrine carbonate, rich in gastropods and ostracods, that started to form at ca. 8000 cal yr BP. Multiproxy core analysis, including geochemical, sedimentological, and micropaleontological (ostracods), suggests a relatively shallow, oligotrophic lacustrine environment with continuous carbonate sedimentation until ca. 800 cal BP. Specific to this karstic paleolake is the occurrence of enigmatic botryoidal carbonates initially detected in coarser sieved fractions (>250 um) during the ostracod analysis, and confirmed via SEM analysis. In micropaleontological slides, botryoidal grains occur as plate-like forms, flat on one side and botryoidal (spherical) on the other, implying their growth on a fixed substrate. SEM analysis revealed that botryoidal grains are made of acicular crystals, similar to the needle-like aragonite, exhibiting two distinctive spherulitic forms: a) spherules made of needles radially spreading from the central point outwards, and b) spherules made of needles radially arranged around a circular void. This potentially implies the same formation process, but different stages of development of needle-like crystals. Botryoidal carbonates are numerous in specific samples throughout the paleolake record, which could possibly be used as a proxy for paleoenvironmental interpretation. However, their origin (organic vs. inorganic, diagenetic) and environmental conditions necessary for their formation remain to be investigated.
